EDUCATION			
Name of course	Passing Year	Name of institute	Marks Obtained
Bachelor of Engineering in Computer Science Specialization in Blockchain Technology	2026	Chandigarh University (CU), Mohali	8.10/10.00 (CGPA) (No backlogs)
Higher Secondary in PCM, CBSE	2020-21	S.R. Public Sr. Sec. School, Kota	75.60%
Matriculation, ICSE	2018-19	Sacred Heart Convent School, Chandausi	87.40%

PROFESSIONAL SUMMARY

Final-year Computer Science Engineering student (Blockchain specialization) with strong hands-on experience in full-stack and backend development. Skilled in building secure, scalable applications using React, Node.js, REST APIs, and relational databases. Demonstrated ability to design real-world systems with authentication, role-based access, and optimized data handling. Passionate about software engineering, problem-solving, and building production-ready applications.

CO-CURRICULAR ACHIEVEMENTS

- Secured 1st prize in HackTheBlock Hackathon organized by ICP India and Blockseblock for building a decentralized disaster relief Dapp (RescueNet) built on the Internet Computer Protocol (ICP). A DApp that connects donors, organizers, volunteers, and victims on a transparent and accountable platform to streamline disaster aid.
- Published Research Papers on “Enhancing Supply Chain Management of Medical Supplies Using Blockchain” and “Benchmarking Probabilistic Data Structure.”

PROJECTS

- Split Expense Management Application ([Splitify](#)):**
 - Tech Stack:** React.js, Supabase, PostgreSQL, Tailwind CSS, Git.
 - Developed a responsive full-stack web application to manage and split expenses among multiple users and groups.
 - Designed an interactive dashboard to display expense summaries, balances, and group statistics.
 - Integrated Supabase authentication with Row-Level Security (RLS) for secure multi-user data access.
 - Improved user experience through form validation, error handling, and clean UI components.
- Sweets Management System ([Github Link](#)):**
 - Tech Stack:** Node.js, Express.js, PostgreSQL/MySQL, JWT, REST APIs, Git.
 - Designed and developed a backend-driven inventory management system for a sweet shop with full CRUD functionality.
 - Implemented JWT-based authentication and protected routes to ensure secure access to APIs.
 - Built RESTful endpoints for adding, updating, deleting, and searching sweets by name, category, and price range.

COURSES AND CERTIFICATIONS

- Blockchain Technology using Ethereum and Polygon | Metacrafters
- Cybersecurity Network Essentials| CISCO Netcad
- Introduction to Applied Cryptography | Coursera
- IBM DevOps, Cloud, and Agile Foundations | Coursera
- Generative AI Foundations | Microsoft

SKILLS

Languages: Java, Python, JavaScript, Solidity
Frontend: HTML, CSS, React, Flutter, Tailwind CSS
Backend: Node.js, Express.js
Databases: PostgreSQL, MySQL, MongoDB
Blockchain: Ethereum, Smart Contracts, DApps
Tools & Technologies: Git, GitHub, REST APIs, JWT Authentication
